EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Louis DelJuidice on 002/01/2005.

The application has been amended as follows:

In the Claims:

In Claim 1, line 6, "the cylinder" has been deleted and --a cylinder-- substituted therefore.

In Claim 1, line 9, "the axial" has been deleted and --an axial-- substituted therefore.

In the Title:

In the title, "Suction and discharge valve" has been deleted, and --Valve-- substituted therefore.

In the Disclosure:

On page 1, before the first line, --This application is a continuation of application 10/332,206 filed 01/03/2003, now abandoned, which is a National Stage of PCT/BR01/00084,

filed 07/02/2001, which claims priority to Brazil PI0003292-1, filed 07/17/2000.-- has been inserted.

On page 6, line 12, "axis 3" has been deleted and --axis-- substituted therefore.

On page 6, line 30, "gasket 5" has been deleted and --gasket-- substituted therefore.

On page 9, line 15, "inn" has been deleted and --in-- substituted therefore.

Reasons for Allowance

The following is an examiner's statement of reasons for allowance: the prior art of record, does not teach or make obvious the apparatus of Claim 1, specifically a suction and discharge valve arrangement for a small hermetic compressor having a compression cylinder, a valve plate and a suction pipe disposed adjacent to the valve plate and substantially orthogonal to a cylinder axis characterized in that the valve plate is provided with a discharge orifice substantially centralized in relation to an axial projection of the internal contour of the compression cylinder; at least one suction orifice occupying an annular sector substantially concentric to at least one of the internal contour of the compression cylinder and discharge orifice in order to maintain with the latter a certain minimum spacing and defining at least part of a suction passage with an end opened to the inside of the compression cylinder and an opposite end opened and connected to the suction pipe by means of a transition portion.

The closest related art of record is Hovarter (5,147,190) who discloses a valve plate having a discharge orifice substantially centralized in relation to an axial projection of the internal contour of the compression cylinder and at least one suction orifice occupying an

annular sector substantially concentric to at least one of the internal contour of the compression cylinder and discharge orifice. However, Hovarter fails to teach or make obvious a suction pipe disposed adjacent to the valve plate and substantially orthogonal to a cylinder axis or a suction passage with an end opened to the inside of the compression cylinder and an opposite end opened and connected to the suction pipe by means of a transition portion.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

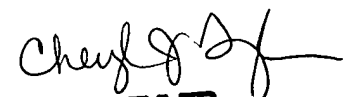

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy P. Solak whose telephone number is 571 272-4833. The examiner can normally be reached on Monday through Friday from 9am to 5:30pm.
